At GALAXY – Mavidou & Sons OE we have been creating products that stand out for their quality and tastiness for more than half a century, while always staying true to consumers and the Greek diet.

In the hands of the second generation, the company has transformed into a modern production unit covering an area of 2000m², drawing on its experience while always looking to the future. The values passed on to us are still our main philosophy.

Thanks to a vertically integrated production facility, we ensure excellent quality and meet our customers' needs quickly and reliably. We have a vertically integrated production unit for plastic packaging materials, which means that 95% of the materials we use for bottling are produced in-house.

In May 2022, the investment in the plastics production department was completed, resulting in the reduction in weight of the lemon & vinegar bottles, thus saving up to 30 tons of plastic annually. Our company's contributions to the recycling system until February 2022 match the data of the Hellenic Recovery Recycling Corporation SA.

The target for 2023 is the construction of a photovoltaic system for autoproduction and energy saving.
